Deployment & Decommission Services

"Multi R IT offers the right solutions for your business"

f5 refresh

How can we help you?

Multi R IT will look after your entire IT lifecycle and assign a project coordinator for the duration of your project.

We provide pre project hardware warehousing and storage of your equipment, build and test a SOE which can also be a customer supplied SOE.

Our comprehensive service includes the delivery of your new technology, managing your stock levels. We also prepare your IT equipment for deployment, including the loading of bespoke company images, operating systems and applications, and manage the delivery of PCs, servers and other hardware.

At the same time we securely remove or transfer your data on end-of-life IT equipment and remove the hardware for reuse, resale or recycling. All this happens in one seamless, cost efficient process.

We have the resources to take the complete decommissioning process out of your hands.

Why is it important to you?

Deployment & decommission are an important part of the lifecycle of your IT assets.

Without a good lifecycle asset management system the organisation can waste time and resources managing inventory, buying unnecessary equipment and software, and maintaining license compliance for software.

With a functioning asset management system your company can expect to reduce the total cost of ownership for IT infrastructure and provide a solid foundation for the operational system necessary to keep the infrastructure operating efficiently.

"We offer complete solutions for IT Deployments & Decommissions."
